

General Information		
See "HLC Operational Framework - Common Front Matter (v..)" for system philosophy, notation, and limitations		
FILE ROLE		Namespace and code-ownership control. Governs which coding system owns each 2-gram and 3-gram code across ISO, HLC, DIAM+, GENC and CWWN+, and defines HLC technical codes
NOTATION		notation scheme: a = alpha (A–Z) - n = numeric (0–9) - x,y,z = alphanumeric (A–Z,0–9) - '..' = exact phrase Alternatives marked with an vertical line " ", redirects marked with ">" and logical / organizations / instutional entries with ":". Duplicate entries (marked with an asterik "**") represent legitimate alternative hierarchies, not data redundancy. For this entries the most attributes are only at the original entry (w/o "**").
TYPES		Complete list of possible entry types (e.g. Water, Country, Historical etc. pp.)
DATA (HU)		MAIN DATA SHEET WITH ALL OF THE FOLLOWING COLUMNS & SHORTS
HLC-2:		ownership for all 2-gram codes (xx) in all files except (nx) codes, which are derived from DIAM+ (see COPY sheet)
	is	ISO (aa) code - two-letter country codes defined in ISO 3166-1
	or	HLC (aa) code - HLC pseudo "area/region/country" codes
	or	HLC (an) code - HLC pseudo (sub-)region codes
	or	s
	or	HLC (axxx) code - shows dependencies of another country and their internal numbers.
	(ax) :	used by HCL to mark special attributes codes e.g. FW: , FA: etc. pp.
		:(E) = terra-based entries - :(W) = aqua-based entries
HLC-3:		ownership for all files only for 3-gram codes (xxx) defined in this document.
	is	ISO (aaa) code - three-letter country codes defined in ISO 3166-1
	or	HLC (axx) code - depends on the content of HLC-2
	or	HLC ('U'nx) code - codes for organizations derived from SDMX+
	or	HLC ('X'nx) code - codes for water regions derived from DIAM+ (some exceptions for 'X0'a)
	or	us.gov ('X'aa) code - geopolitical entities, names and codes
HLC-M:		HLC MAIN 3-gram/4-gram codes. range extends are marked by !- . Optional extends within brackets. Some numbers are not exclusive used by the possessing element (marked with ~), but are encroached upon by the preceding element (marked with -) or the following element (marked with +).
## type:		e.g. G=global - R=region - S=subregion - H=historical - C=country - W=water / see ## types special sheet
HLC-X S:		HLC technical 3-gram (axa) to 5-gram codes ... and ... optional code ...
	(nnn)	M49: UNO numerical code for country or region (current and old ones)
	(nnnn(n)	4-gram to 5-gram codes - sometimes identical to HLC-S codes from CODEHW
	~ (nnn)	M49: inherit UNO numerical code for country or region
	: ('9'nn)	GENC: (us.gov) geopolitical entities, names, and codes - num codes > 900
	# (naa)	CWWN+: codes for World Waterbody Names + HCL extensions
COPY (HD)		THIS SHEET CONTAINS AN COPY OF THE DIAM+ DATA DEFINITIONS WITH THE SAME ATTRIBUTES AS BEFORE
DIAM+	is	HLC (nx) code - codes for water regions as defined by DIAM+ (which bears the codes ownership)

Code	HLC-Earth	Others	Entry Types
00	(X) Unspecified	(N) NUL Entry	
08		(T) Tectonical	
09	(F) Functional	(L) Logical	
10		(W) Waters	
20	(G) Global	(I) International	Level 0
21	Global-G	(organization)	Single Ocean / Continent
